

The Quay Ladder Bracket

Materials

The Quay Ladder Bracket consists of 3 main parts, the quay ladder bracket, the Rescue Ladder and one of two top handles. The Quay Ladder Bracket in its standard configuration is made of acid-resistant steel with a UV-resistant yellow (RAL 1016) powder coating. The Quay Ladder Bracket can be ordered in a Raw Stainless Steel finish. The Rescue Ladder is made of aluminium with UV-resistant yellow (RAL 1016) powder coating and filled with polyurethane foam (floats). 3M premium yellow reflexes. The Rescue Ladder is approved According to the Swedish Work Environment Authority's regulation SPCR 064, AFS 2004:3. The High- and low handles are made of acid-resistant stainless steel with a UV-resistant yellow (RAL 1016) powder coating. 2 pieces of 3M premium yellow reflexes are attached to each handle. The Rescue Ladder is available in 3,5 and 4,5 meters. Keep in mind that the ladder should always reach 1 meter below the water surface at low tide. The Rescue Ladder is cut at an appropriate length if needed.
